**Davigel – Sysco France**

Sysco France, a company born of the merger of Brake France and Davigel, occupies a unique position as producer and distributor of fresh, frozen and grocery food products for professional catering. Sysco France is a subsidiary of the Sysco Group, the world leader in the distribution of food and non-food products to catering professionals. Present throughout France, the mission of Sysco France is to create, select, manufacture and distribute the best products for our customers with exceptional quality of service. Sysco France offers its customers raw seafood and developed with more than 85 different species, both in fresh and frozen.

Sysco France, société née de la fusion de Brake France et de Davigel, occupe un positionnement unique de producteur et distributeur de produits alimentaires frais, surgelés et d’épicerie pour la restauration professionnelle. Sysco France est une filiale du Groupe Sysco leader mondial de la distribution de produits alimentaires et non-alimentaires aux professionnels de la restauration. Présent partout en France, la mission de Sysco France est de créer, sélectionner, fabriquer et distribuer les meilleurs produits pour nos clients avec une qualité de service exceptionnelle. Sysco France propose à ses clients des produits de la mer bruts et élaborés avec plus de 85 espèces différentes, aussi bien en frais qu’en surgelé.

**Fishing Methods Used in Associated Fisheries**

- Midwater trawl
- Bottom trawl
- Dredge
- Purse seine
- Seine nets
- Gillnets and entangling nets
- Hook and line
- Long line
- Rake / hand gathered / hand netted
- Pots and traps
- Miscellaneous

**Summary**

Davigel has been partnered with Sustainable Fisheries Partnership (SFP) since 2013, when it became the international NGO's first foodservice partner and first partner based in France. In 2017, Davigel became the first French company to participate in the Ocean Disclosure Project, signifying the company’s commitment to transparency in seafood supply chains.

The 2018 ODP profile covers the main wild-caught species sourced by Davigel in 2017.

*Sustainability is one of Davigel’s 4 quality commitments. To broaden our scope and involve ourselves in the preservation of fisheries resources and conservation of marine environments, we have developed partnerships with two non-governmental organizations: SFP and WWF. Together with them, we put forward the best responsible fishing and farming programs based on international eco-certifications. By 2017, 82% of the volumes purchased were eco-certified, and 87% were classified as responsible or sustainable according to the Davigel Responsible Seafood Policy.*
In addition, we prohibit the commercialization of any identified endangered species on the IUCN list or classified IUU (Illegal, Unreported and Unregulated). Finally, for the rest, Davigel is involved in the improvement of sectors by participating in three Fishery Improvement Projects (FIPs). All this has enabled us to improve our overall sustainability Metrics indicator for our seafood from a score of 1.78 in 2013 to 1.42 in 2017, based on internal analysis and with a goal of 1."

Canada

<table>
<thead>
<tr>
<th>Dredge</th>
<th>Certified</th>
<th>Well managed</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Environmental Notes**

- This fishery is unlikely to impact PET species.
- The gear type used for this fishery is considered selective and bycatch is low. Among the most common species caught as bycatch are monkfish, invertebrates, skate species, and yellowtail flounder.
- The fishery is conducted with towed steel scallop dredges that directly impact on the sea bed. However, fished areas are likely to be subject to considerable natural disturbance and fishers use detailed habitat maps to minimise bottom contact time.

**General Notes**

**Caveat**

The environmental notes for this fishery are based on a provisional assessment and are not derived from the FishSource profile.

**Reference**

### Environmental Notes

- There are risks to sharks, skates and rays with this fishery, but there are mitigation measures in place.
- Bycatch is a risk in this fishery.
- Bottom trawls will directly impact on the sea bed.

### General Notes

- No additional notes.
**Argentine red shrimp**  
*Pleoticus muelleri*  
**Patagonian:** Argentina inshore  
**Fishery countries:** Argentina

### Environmental Notes
- There is a lack of public information on interactions with ETP for this fishery.  
- There is a lack of information on bycatch in this fishery.  
- Bottom trawls will directly impact on the sea bed.

### General Notes
- This fishery is part of the Argentina inshore red shrimp – bottom trawl FIP.

---

**Argentine red shrimp**  
*Pleoticus muelleri*  
**Patagonian:** Argentina offshore  
**Fishery countries:** Argentina

### Environmental Notes
- There are risks to sharks and rays with this fishery.  
- Bycatch of hako is a risk with this fishery.  
- Bottom trawls will directly impact on the sea bed.

### General Notes
- This fishery is part of the Argentina offshore red shrimp – bottom trawl FIP.

---

**Argentine shortfin squid**  
*Iloa argentinus*  
**SW Atlantic:** Bonaerense/ North, South Patagonian  
**Fishery countries:** Argentina

### Environmental Notes
- There is a lack of information on interactions with PET species in this fishery.
• There is a lack of information on bycatch for this fishery.
• Bottom trawls will directly impact the sea bed.

General Notes
• No additional notes.

Environmental Notes
• There are risks to seabirds and marine mammals with this fishery.
• Bycatch consists of flatfish species, predominantly flounder.
• Bottom trawls will directly impact the sea bed.

General Notes
Other ratings
The Marine Conservation Society categorises the Baltic West demersal otter trawl fishery for Atlantic cod as 'Rating 5 (red)'.

Caveat
The stock status and management rating for this fishery is based on a provisional assessment and is not derived from the FishSource profile.

References

Environmental Notes
• There are risks to seabirds and marine mammals with this fishery, but there are mitigation measures in place.
• There is bycatch for this fishery but non-target species are retained. Management measures are in place to reduce impacts on retained species.
• The impact depends on the gear type. Bottom trawls will have the greatest impact on the sea bed. MSC conditions and recommendations are in place to strengthen understanding of fishery interactions with sensitive habitat.

General Notes
• No additional notes.
Environmental Notes

- This fishery is unlikely to have direct impacts on PET species.
- There is bycatch for this fishery but non-target species are retained. Management measures are in place to reduce impacts on retained species.
- Bottom trawls will directly impact on the sea bed.

General Notes

- No additional notes.

Environmental Notes

- This fishery is unlikely to impact PET species.
- Bycatch for this fishery is considered low.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

- No additional notes.

Environmental Notes

- There are risks to sea turtles with this fishery, but there are mitigation measures in place.
- Bycatch is a risk in this fishery, but there are management measures in place.
- Bottom trawls will directly impact on the sea bed. However, management measures are in place.

General Notes

- No additional notes.
Atlantic cod
_(Gadus morhua)_

W Greenland inshore

Fishery countries:
Greenland

Environmental Notes
- Profile not yet complete.

General Notes
- The state of the inshore West Greenland cod stock is unknown and there is no management plan for the fishery.

References
- MCS’s Good Fish Guide – Cod, Atlantic cod, West Greenland

Atlantic wolffish
_(Anarhichas lupus)_

Iceland

Fishery countries:
Iceland

Environmental Notes
- No locally affected seabirds or marine mammals are classified as PET species.
- Bycatch of seabirds occurs in the longline fishery, but estimates suggest that bycatch rates are low. There is an MSC condition in place to provide electronic logbook reporting for seabird and marine bycatch.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes
- The life-history characteristics of Atlantic wolffish: long-lived and late maturity, increase its vulnerability to overfishing.

Caveat
The environmental notes for this fishery are based on a provisional assessment and are not derived from the FishSource profile.

Environmental Notes

- There are risks to sharks, skates and rays with this fishery. Occasional interactions with marine mammals occur.
- Bycatch is a risk for this fishery, but there is insufficient data available to assess significance.
- Bottom trawls will directly impact on the sea bed. However, management measures are in place.

General Notes

- No additional notes.

### Environmental Notes
- Profile not yet complete.
- This fishery is unlikely to have a significant impact on the sea bed.

### General Notes
- No additional notes.

#### Northern prawn
*Pandalus borealis*
- **Location**: Barents Sea
- **Fishery countries**: Norway
- **Fishery type**: Bottom trawl
- **Certified**: Yes
- **Status**: Well managed

#### Environmental Notes
- Profile not yet complete.
- Bycatch is a risk for this fishery, but there are mitigation measures in place.
- Bottom trawls will directly impact on the sea bed.

#### General Notes
- This fish plays an important role in the marine food web and so potential impacts on the wider marine ecosystem must be monitored.

#### Northern prawn
*Pandalus borealis*
- **Location**: Western Greenland
- **Fishery countries**: Greenland
- **Fishery type**: Bottom trawl
- **Certified**: Yes
- **Status**: Well managed

#### Environmental Notes
- This fishery is unlikely to impact PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact on the sea bed.

#### General Notes
- This fish plays an important role in the marine food web and so potential impacts on the wider marine ecosystem must be monitored.

#### Norway lobster
*Nephrops norvegicus*
- **Location**: Off Horn's Reef
- **Fishery countries**: Netherlands
- **Fishery type**: Bottom trawl
- **Certified**: No
- **Status**: Needs improvement

#### Environmental Notes
- Profile not yet complete.
- This fishery is unlikely to have a significant impact on the sea bed.
Environmental Notes

- This fishery is believed to have minimal impacts on PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact on the sea bed. There is insufficient data available to assess significance of impacts on vulnerable habitats such as cold water coral reefs.

General Notes

- No additional notes.
### Patagonian grenadier

- **Family**: Macrouridae
- **Scientific name**: Macrourus magellanicus
- **Fishery countries**: Argentina

**Environmental Notes**
- This fishery interacts with several seabirds, sharks and skates classified as ETP species.
- Bycatch is a concern for this fishery. An MSC condition put in place to determine levels of impact on bycatch species has now been closed.
- This fish is also caught as a bycatch species in other fisheries.
- Bottom trawls will directly impact the sea bed.

**General Notes**

**Caveat**
The environmental notes for this fishery are partly based on information from sources other than the FishSource profile.

**References**

### Patagonian scallop

- **Family**: Pectunculidae
- **Scientific name**: Patagonula patagonica
- **Fishery countries**: Argentina

**Environmental Notes**
- This fishery is unlikely to impact PET species.
- Bycatch for this fishery is considered low.
- Bottom trawls will directly impact the sea bed. However, management measures are in place.

**General Notes**

**Caveat**
The environmental notes for this fishery are based on a provisional assessment and are not derived from the FishSource profile.

Picked dogfish

- Squalus acanthias
- US Atlantic
- Fishery countries: U.S.
- Gillnets and entangling nets
- Certified
- Well managed

Environmental Notes

- This fishery interacts with seabirds, sea turtles and marine mammals but is thought unlikely to have significant impacts on PET species. However, an MSC condition has been set in place requiring the fishery to show that impacts on Atlantic right whales are known and are highly likely to be within accepted limits.
- Bycatch is considered low volumes and there are measures in place to reduce it.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

Caveat

The environmental notes for this fishery are based on information that is derived from sources other than the FishSource profile.

Environmental Notes
- There is a lack of information on interactions with PET species in this fishery. The only known significant impact with this fishery is the effect of the introduced crawfish species on the indigenous crawfish species.
- Bycatch for this fishery is considered low.
- This is a freshwater fishery close to rice fields, so the habitat impact is very limited.

General Notes
- No additional notes.
