Meijer

Meijer is a family-owned, privately-held retailer based in Grand Rapids, Michigan that proudly employs nearly 70,000 team members and operates 247 supercenters in Michigan, Ohio, Indiana, Illinois, Kentucky and Wisconsin. Since 1934, Meijer is driven by the mission to be a good neighbor and actively supports local communities.

- Purse seine
- Seine nets
- Gillnets and entangling nets
- Hook and line
- Longlines
- Handlines and pole-lines
- Pots and traps

Summary

Our customers desire to know that the seafood they purchase from Meijer comes from high-quality, sustainable sources. This requires us to keep an unwavering focus on governance, supplier partnerships, and support for continuous improvement efforts to provide the best quality seafood. Meijer works with the Global Aquaculture Alliance (GAA) to help its farmed seafood suppliers achieve the GAA’s strict Best Aquaculture Practices (BAP) certification. The Company encourages all of its wild-caught seafood suppliers to become certified by the Marine Stewardship Council (MSC) or the Global Sustainable Seafood Initiative, and also sources from international fisheries involved with Fishery Improvement Projects (FIP).

**Environmental Notes**

- This fishery is unlikely to have unacceptable impacts on PET species. PET species that may interact with the fishery include marine mammals, sea turtles and Atlantic sturgeon, but recorded interactions are low.
- This fishery does not pose a risk of serious harm to bycatch species. Major bycatch species include dogfish and skate, of which, thorny skate is overfished. There is a partial strategy in place to ensure the fishery does not hinder the recovery of thorny skate.
- Bottom trawls will directly impact on the sea bed. However, management measures are in place.

**General Notes**
NOAA FSSI 4: The fishery is not overfished and overfishing is not occurring and the stock biomass is at or above 80% of the biomass that produces maximum sustainable yield.

Caveat

The environmental notes for this fishery are based on a provisional assessment and are not derived from the FishSource profile.

Reference

Environmental Notes

- This fishery is unlikely to have direct impacts on PET species.
- Bycatch for this fishery is considered low.
- This fishery is unlikely to have a significant impact on the sea bed.

General Notes

- This fish plays an important role in the marine food web and so potential impacts on the wider marine ecosystem must be monitored.

American lobster

Homarus americanus

Georges Bank and Off-Shore Nova Scotia

Fishery countries: Canada

Pots and traps

Certified

Environmental Notes

- Direct effects of the fishery on PET species are thought likely to be low. While entanglement in lobster gear presents a risk to marine mammals, especially North Atlantic right whales, no entanglements of right whales were reported in the MSC public certification report.
- Measures are in place to prevent fishing from hindering the recovery and rebuilding of the main bycatch species.
This fishery is unlikely to have a significant impact on the sea bed.
